

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. PREFATORY NOTE.

The following scheme represents the present arrangement of the collection of Philosophical works in the Library of Congress. In its preparation various systems of classification have been consulted and freely used, notably Cutter, Dewey (especially its expanded form represented in the *Manuel*, 1904, of the Institut international de bibliographie, Bruxelles), Hartwig, Schleiermacher, the Bibliography of Benjamin Rand, the Psychological index, and the index to the *Zeitschrift für psychologie und physiologie der sinnesorgane*.

It seemed that in this class a desired degree of consistency or uniformity of treatment was not attainable in the distribution of the works of particular philosophers by subject, owing to lack of issues of such works in separate form, the only existing or available editions in many cases forming part of collections, collected works, or combinations of two or more special works. It was thought best, therefore, to keep together the resources of the library on a given writer, providing for the representation of special works under the subject or subjects concerned by filing reference entries in the shelf list under Logic, Metaphysics, Psychology, Ethics, and more specific subjects, as the case might be. Although duplicating to a certain extent the arrangement of the alphabetical catalogue, this appeared to be the only method by which great irregularity of treatment could be avoided.

It may also be noted that the schedules contain a number of names of writers of minor importance who happen to be represented in the collection. These were included chiefly for the purpose of illustrating the method of treatment of such classes of material.

The group Occult Sciences has been appended to the literature of Psychology, owing to the difficulty of clearly separating the same from the literature of Metapsychology or Psychic Research, the one shading into the other without presenting any marked line of cleavage. This reason may also be advanced for placing Manners, Social Customs, and Etiquette at the end of Ethics.

The Greek and Latin classic authors may be collected eventually in Class PQ (Classic literature), to be represented in Philosophy by

PREFATORY NOTE

reference entries in the shelf list only. It has not been thought necessary to adopt for the schedules the fuller and more exact forms of name of classic writers which govern in the catalogues of the library.

Throughout the preparation of the scheme I have had the counsel and criticism of Mr. Charles Martel, the Chief Classifier.

Explanation of Abbreviations, Symbols, etc.

Headings marked with an asterisk (*) may be subdivided:

- (0) Early works (including Latin and Greek).
- (1) English.
- (2) French.
- (3) German.
- (4) Italian.
- (5) Spanish.
- (6)
- (7)
- (8) Other, A-Z.

The numbers in curves (1) (2) (3) (4) following a heading or name refer to the corresponding tables of subdivisions, printed at the end (pp. 93-94), which may be applied in subdividing those subjects (with such modifications as may seem desirable in special cases).

Philosophers not represented in the scheme may be provided for as required, in their alphabetical positions, by using unassigned numbers, or Cutter numbers, e. g., B 3638 Romagnosi,
B 3616.F4 Ferri.
